

BOOK 2- ENERGY EFFICIENCY IN THERMAL UTILITIES

Table of Contents

Chapter

1	FUELS AND COMBUSTION	
1.1	Introduction to Fuels	01
1.2	Properties of Liquid Fuels	01
1.3	Properties of Coal	06
1.4	Properties of Gaseous Fuels	12
1.5	Properties of Agro Residues	14
1.6	Combustion	15
1.7	Combustion of Oil	16
1.8	Combustion of Coal	22
1.9	Combustion of Gas	22
1.10	Draft System	24
1.11	Combustion Controls	25
2	BOILERS	
2.1	Introduction	27
2.2	Boiler Systems	28
2.3	Boiler Types and Classifications	29
2.4	Performance Evaluation of Boilers	33
2.5	Boiler Blowdown	39
2.6	Boiler Water Treatment	41
2.7	Energy Conservation Opportunities	47
2.8	Case Study	52

3	STEAM SYSTEM	
3.1	Introduction	55
3.2	Properties of Steam	55
3.3	Steam Distribution	58
3.4	Steam Pipe Sizing and Design	59
3.5	Proper Selection, Operation and Maintenance of Steam Traps	62
3.6	Performance Assessment Methods for Steam Traps	73
3.7	Energy Saving Opportunities	75
4	FURNACES	
4.1	Types and Classification of Different Furnaces	89
4.2	Performance Evaluation of a Typical Furnace	96
4.3	General Fuel Economy Measures in Furnaces	105
4.4	Case Study	117
5	INSULATION AND REFRACTORIES	
5.1	Purpose of Insulation	120
5.2	Types and Application	120
5.3	Calculation of Insulation Thickness	122
5.4	Economic Thickness of Insulation(ETI)	124
5.5	Simplified Formula for Heat Loss Calculation	127
5.6	Refractories	128
5.7	Properties of Refractories	129
5.8	Classification of Refractories	131
5.9	Typical Refractories in Industrial Use	132
5.10	Selection of Refractories	139
5.11	Heat Losses from Furnace Walls	139

6	FBC BOILERS	
6.1	Introduction	143
6.2	Mechanism of Fluidised Bed Combustion	143
6.3	Types of Fluidised Bed Combustion Boilers	145
6.4	Retrofitting of FBC Systems to Conventional Boilers	151
6.5	Advantages of Fluidised Bed Combustion Boilers	152

7	COGENERATION	
7.1	Need for Cogeneration	155
7.2	Principle of Cogeneration	155
7.3	Technical Options for Cogeneration	156
7.4	Classification of Cogeneration Systems	159
7.5	Factors Influencing Cogeneration Choice	160
7.6	Important Technical Parameters for Cogeneration	161
7.7	Prime Movers for Cogeneration	164
7.8	Typical Cogeneration Performance Parameters	168
7.9	Relative Merits of Cogeneration Systems	168
7.10	Case Study	169

8	WASTE HEAT RECOVERY	
8.1	Introduction	173
8.2	Classification and Application	174
8.3	Benefits of Waste Heat Recovery	176
8.4	Development of a Waste Heat Recovery System	177
8.5	Commercial Waste Heat Recovery Devices	177

ANNEXURE

Checklists & Tips for Energy Efficiency in Thermal Utilities	190
--	-----
